COMPARISON TO PREVIOUS ISSUE

Issue EDIN10 of 1 June 2011: Upgrade to UN/EDIFACT Directory D.10A

Structural changes in D.10A: Renaming of SG15 => SG16; SG18 =>SG19; SG19 =>SG20; SG21 =>SG22; SG25=>SG27; SG26 =>SG28; SG28=>SG30; SG29=>SG31; SG33=>SG35; SG38=>SG40; SG39=>SG41; SG40=>SG42; SG43=>SG45; SG47=>SG47; SG49=>SG52; SG51=>SG54; SG52=>SG55

The Segment PAT Payment Terms (in SG8) is renamed to PYT Payment Terms

EDIFICE recommends to make use of EDIFACT code lists.

- Where possible the earlier references to UN/ECE Recommendations were removed and EDIFACT qualifiers are used instead.
- A number of EDIFICE defined qualifiers were replaced with relevant EDIFACT qualifiers or were completely removed when not in use. In some cases new EDIFICE qualifiers were defined since the old qualifiers have been included in the EDIFACT code list with a different definition

The summary of changes in this MIG is listed below:

EDIFICE FUNCTIONAL DEFINITION

The principle function of the invoice message is a claim for payment for goods or services supplied under conditions agreed between supplier and customer. The message is sent by the supplier to the customer.

The following other functions are also provided for in this guideline:

- credit note - for communicating details of an amount credited to the trading account by the supplier (other than that resulting from a payment by the customer).
- debit note - for communicating details of an amount debited to the trading account by the supplier (other than an invoice for goods or services supplied).
- pro-forma invoice - for communicating invoice information without actually claiming payment.
- consignment invoice - for communicating invoice information about goods delivered to the customer which remain the property of the supplier (and for which, therefore, payment is not (yet) claimed).

This usage has been created with the intention of satisfying about eighty percent of the electronics industry EDI invoicing requirements. It is a 'core' set of segments for the invoice transaction. During the development of this document it has been recognised that there are further requirements that are special to certain areas of the electronics industry. These requirements will need to be considered under a separate document.

Amounts are expressed in a single reference currency for the whole message. Rates of exchange may be given for the conversion of amounts in the reference currency to amounts in a target currency.

The message can be used both for international (cross border) and domestic invoicing.

For a domestic invoice which is denominated in a foreign currency the VAT is handled as follows:

- All values in the invoice are specified in the foreign currency.
- The totals of goods values, VAT and invoice total are also specified in local currency.
- The message must contain an invoicing currency, target currency, and rate of exchange to allow invoice total amount, total line items amount and total tax amounts to be sent in both currencies.
