COMPARISON TO PREVIOUS ISSUE

Issue EDPO10 of 1 June 2011: Upgrade to UN/EDIFACT Directory D.10A

The only structural change that occurs is the renumbering of the Segment Groups from SG29 onwards : A group of segments providing ordering details of the individual line items i.e. ordered products or services.

EDIFICE recommends to make use of EDIFACT code lists.

1. Where possible the earlier references to UN/ECE Recommendations were removed and EDIFACT qualifiers are used instead.
2. A number of EDIFICE defined qualifiers were replaced with relevant EDIFACT qualifiers or were completely removed when not in use. In some cases new EDIFICE qualifiers were defined since the old qualifiers have been included in the EDIFACT code list with a different definition

The summary of all qualifier changes in this MIG is listed below:

Place	EDIFICE Code (*)	Replaced with EDIFACT code/EDIFICE code (*)/Removed/Added
All DTM-2005	X03=CCYMMDDHHMMZZZZZ (*) X04=CCYMMDDHHMMSSZZZZZ (*)	205=CCYMMDDHHMMZHHMM Removed
SG55-RFF-1153	FDS=Firm Delivery Schedule Reference number (*)	AAN=Delivery Schedule number

Issue EDPO06 of 1 June 2005:

- Upgrade to UN/EDIFACT Code list D.04B

Replacement of EDIFICE codes with standard codes.

- SG13 - PAC - DE 7065:

'CN' Container replaced with 'CN' Container, not otherwise specified as transport equipment

'PE' Pallet replaced with 'PX' Pallet

12 May 2004 : EDIFIX 5.0 Technical Upgrade

- The 'KMT' qualifier in SEG QTY and PRI DE 6411 is now defined as (*) EDIFICE code. UN/ECE Recommendation 20 specifies 'KTM' as qualifier for 'kilometre'.

21 May 2003: EDIFIX 4.2 Technical upgrade; review and correction of examples

Issue EDPO05 of 13 November 2002 is based on UN/EDIFACT D97.A / Code List D01.A

- Addition of the following code value:

SG28, LIN segment, CO C212, DE 7143 code 'SRV' EAN.UCC Global Trade Item Number

SG28, PIA segment, CO C212, DE 7143 code 'SRV' EAN.UCC Global Trade Item Number

Issue EDPO04 of 29 May 2002 : addition of recommended list of DTM qualifiers

Issue EDPO04 of 14 June 2000 : Addition of qualifiers in NAD on header and detail level to allow specification of the end-customer identification for pricing reasons, or the ultimate destination partner.

Addition of the following code values:

SG2, NAD segment, DE 3035, codes 'MA' Party for whom item is ultimately intended
'PC' Actual purchaser's customer

SG39, NAD segment, DE 3035, as above

SG39, NAD segment, DE 3055, codes '9' EAN (International Article Numbering association)

'16' DUNS (Dun & Bradstreet)

'91' Assigned by seller or seller's agent

'92' Assigned by buyer or buyer's agent

Issue EDPO04 includes the changes that have been made to the issue 3 of the Purchase Order document endorsed by the EDIFICE Plenary on 13 April 1994. The changes are as follows:

- Recast from the 92.1 version of the UN/EDIFACT directory to the D.97A version,

- Addition of the following code values:

all NAD segments, DE 3055, code '16' DUNS (Dun & Bradstreet)

all TAX segments, DE 5305, code 'AA' Lower rate

SG1, RFF segment, DE 1153, code 'BO' Blanket order number

SG3, RFF segment, DE 1153, code 'GN' Government reference number

SG5, COM segment, DE 3155, code 'EM' Electronic mail
 SG10, TDT segment, CO C040, DE 3055, codes '3' IATA (International Air Transport Association)
 '9' EAN (International Article Numbering association)
 '11' Lloyd's register of shipping
 '16' DUNS (Dun & Bradstreet)
 '91' Assigned by seller or seller's agent
 '92' Assigned by buyer or buyer's agent
 '166' US, National Motor Freight Classification Association
 SG12, TOD segment, DE 4215, codes 'CC' Collect
 'PP' Prepaid (by seller)
 SG12, LOC segment, CO C517, DE 3055, codes '3' IATA (International Air Transport Association)
 '91' Assigned by seller or seller's agent
 '92' Assigned by buyer or buyer's agent
 SG28, LIN segment, DE 7143, codes 'DI' Distributor's part number
 'MF' Manufacturer's (producer's) article number and
 'UP' UPC (Universal product code)
 SG28, LIN segment, DE 3055, codes '89' Assigned by distributor
 '90' Assigned by manufacturer and
 '113' US, UCC (Uniform Code Council)
 SG28, PIA segment, DE 7143, codes 'AA' Product version number
 'CL' Color number
 'DI' Distributor's part number
 'MF' Manufacturer's (producer's) article number
 'MN' Model number
 'SN' Serial number and
 'UP' UPC (Universal product code)
 SG28, PIA segment, DE 3055, codes '89' Assigned by distributor
 '90' Assigned by manufacturer and
 '113' US, UCC (Uniform Code Council)
 SG28, IMD segment, DE 7077, code 'C' Code (from industry code list)
 SG28, IMD segment, DE 7081, code '26' Ship to line
 SG32, PRI segment, DE 5375, code 'CP' Current price
 SG33, RFF segment, DE 1153, code 'BO' Blanket order number
 SG34, PAC segment, CO C202, DE 3055, code '116' US, ANSI ASC X12
 SG39, NAD segment, DE 3035, code 'MF' Manufacturer of goods,

- Addition of the following segment groups/segment:
 SG21
 SG44
 SG45
 SG53, RFF segment,
- Replacement of the following segment:
 SG34, MEA segment to QTY segment,
- Replacement of the following codes:
 all TAX segments, code 'WUS' to 'VAT' Vat added tax
 SG8, PAT segment, CO C112, DE 2151, code 'D' to 'CD' Calendar day (includes weekends and holidays)
 SG10, TDT segment, DE 8067, code '10' to '1' Maritime transport
 code '20' to '2' Rail transport
 code '30' to '3' Road transport
 code '40' to '4' Air transport
 code '50' to '5' (same value)
 code '60' to '6' Multimodal transport,
- Deletion of the following code values:
 SG5, COM segment, DE 3155, code 'TL' Telex
 SG28, PIA segment, DE 7143, code 'CCM' COCOM list number,
- Usage changed for the following segment groups/segments/data elements:
 all FTX segments, CO C107, X to A
 all FTX segments, CO C108, R to D
 SG3, D1 to D..2
 SG5, O1 to O..2
 SG5, COM segment, A..3 to O..3
 SG5, CTA segment, CO C056, DE 3412, A to D

SG10, TDT segment, CO C040, DE 3055, X to A
 SG12, TOD segment, DE 4215, X to O
 SG12, TOD segment, DE 1131, X to D
 SG12, TOD segment, DE 3055, X to D
 SG12, LOC segment, CO C517, DE 3225, A to R
 SG12, LOC segment, CO C517, DE 1131, X to D
 SG12, LOC segment, CO C517, DE 3055, X to D
 SG12, LOC segment, CO C517, DE 3224, D to N
 SG13, PAC segment, CO C202, DE 1131, X to D
 SG13, PAC segment, CO C202, DE 3055, X to D
 SG19, ALC segment, CO C552, DE 1230, R to D
 SG19, ALC segment, CO C552, DE 5189, X to D
 SG19, ALC segment, DE 1227, X to D
 SG28, LIN segment, CO C212, R to A
 SG28, IMD segment, DE 7081, D to O
 SG28, IMD segment, CO C273, DE 7009, X to A
 SG28, IMD segment, CO C273, DE 7008, R to D
 SG34, O1 to D1
 SG34, PAC segment, CO C202, DE 3055, X to D
 SG39, O1 to O..2
 SG39, NAD segment, CO C082 X to D
 SG41, R..2 to D..2
 SG43, D..10 to O..10
 SG43, ALC segment, CO C552, DE 1230, R to D
 SG43, ALC segment, CO C552, DE 5189, X to D
 SG44, R1 to D1,

- Where UN/ECE Recommendations are referenced the most commonly used codes have been identified,
- Alignment of segments and composite data elements to ensure conformance (data harmonization) across all EDIFICE Implementation Guidelines,
- Update of the REFERENCES and EXPLANATORY NOTES section to comply with the EDIFICE Standards for Documentation of Message Implementation Guidelines issue 3,
- Update of examples,
- Documentation adjustments resulting from the use of GEFEG's EdiFix Message Implementation Guidelines documentation tool,
- Correction of typographical errors.

EDIFICE FUNCTIONAL DEFINITION

It is advised to read the functional definition and study the message guideline examples thoroughly before implementing any of the three messages.

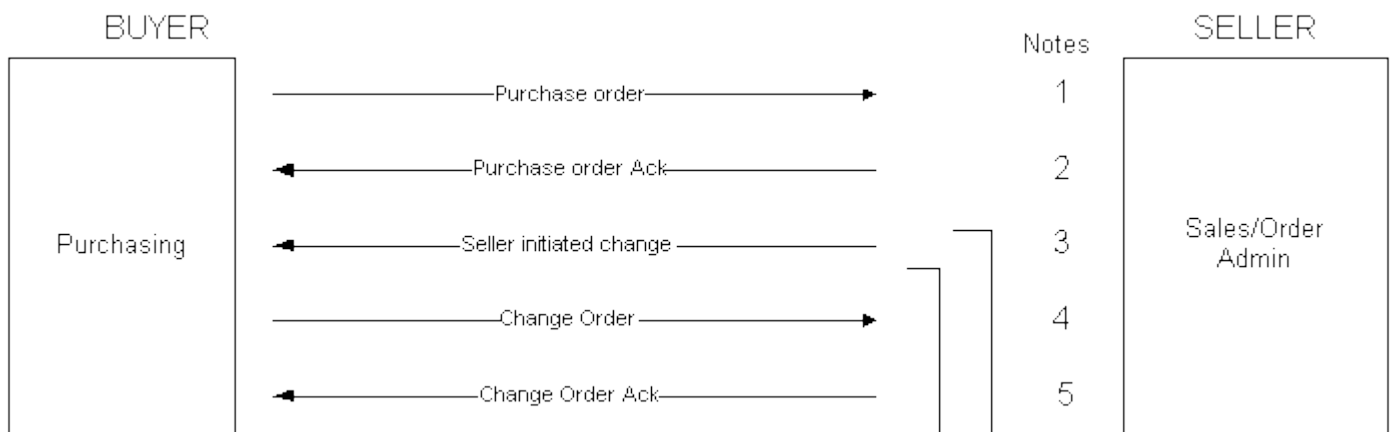

EDIFICE provides three interrelated messages for the purchase ordering process: The Purchase Order (ORDERS), the Purchase Order Change Request (ORDCHG) and the Purchase Order Response (ORDRSP). Together they are used to form a purchase order cycle.

This usage has been created with the intention of satisfying about eighty percent of the electronics industry EDI ordering requirements. It is a 'core' set of segments for the order transaction. During the development of this document it has been recognised that there are further requirements that are special to certain areas of the electronics industry. These requirements will need to be considered under a separate document.

EDI Business Architecture for the Order cycle

The traditional order cycle caters for the ordering of materials and/or services under a business or commercial agreement. It is assumed that this agreement defines all standard, basic trading terms and conditions as agreed between the two parties. As such, all three messages used in the traditional order cycle always constitute a business transaction under this agreement, to which they will refer for basic terms and conditions.

Buyer calculates requirements and places purchase orders, based upon agreed standard product and pricing info, or upon Request for Quote/Quotes.

Notes.

1. Buyer generates (stand-alone) Purchase Order (ORDERS)
2. Seller responds with Order Response (ORDRSP)
3. Seller-initiated changes done via Order Response (ORDRSP)
- 4A. Change Orders issued from buyer to convey buyer-initiated changes (ORDCHG)
- 4B. Change Orders issued from buyer to notify seller of non-acceptance of seller-initiated changes (ORDCHG) - exception process
- 4C. Change Orders issued from the buyer to notify the seller of acceptance of seller-initiated changes (ORDCHG) - option
- 5A. Seller acknowledges Buyer-initiated Change Orders via Order Response (ORDRSP). This ends the loop.
- 5B. Seller acknowledges Change Orders issued by Buyer, as a result of Seller-initiated changes (ORDRSP). This ends the loop.

Order Cycle Principles

- The original Purchase Order should refer to a business or commercial agreement. Any subsequent message to the original Purchase Order should refer to the original Purchase Order. In doing so, reference to the business or commercial agreement for the business transaction is given indirectly. Therefore, no reference to the contract or quote agreement needs to be specified in Purchase Order Change Requests or Purchase Order Responses following the Purchase Order unless a Purchase Order Change Request is issued to add line items to the Purchase Order.
- If references to more than one contract/quote exist in the same order cycle, an overall agreement applicable to all contracts/quotes involved regarding payment terms, terms of delivery (i.e. data at header level) is needed between the business partners, as this information cannot be conveyed per contract/quote in the EDI message.
- It is recommended to exclude all information that could be previously agreed in a business or commercial agreement from the EDI messages. Examples thereof are TAX, PAT, PCD, TDT, TOD and LOC. Use these segments only if the information needs to be conveyed at the time of ordering.
- One item number (Product Number) agreed to be the primary reference number between the buyer and the seller should be used to identify the item being ordered. Only if a service is ordered for which no code identification exists, may the primary reference be replaced by an item description.
- To identify the individual items being ordered (SG28), the combination of the Buyer's original Document Number (BGM DE1004) and the Buyer's original line number (RFF in SG33 DE1156) will normally be used. Any other means of identification must be agreed upon by the trading partners in the Trading Partner Agreement.
- All information related to purchased goods or services must be specified at the line item level, to avoid any ambiguity. Thus each line item can be treated as an order.
- It is strongly advised not to take minor corrective actions or changes via EDI. One of the objectives of EDI is to provide good data. Should bad data be transmitted or should a change request occur for administrative data in the Header section, then corrective action would normally take place via other means than EDI.
- The use of free text in the messages is highly discouraged.
- Business partners must agree either to send contract/quote information at header level or at line level, all through the order cycle. It is recommended to have these references at the header level for simplicity of processing.

In order to keep the interrelation between the three messages unambiguous, a couple of key definitions and basic assumptions in the information flow need to be clarified.

- If a Purchase Order has more than one line item, it has to be considered as a collection of one line item Purchase Orders being identified by the Purchase Order number and the line item number. Each line item therefore has its own life cycle.
- Each transmitted message in the order cycle must have a unique document number in BGM DE 1004.

EDIFICE recommends to keep all references to preceding messages (except for the reference to the original Purchase Order) at detail level in the RFF segment in SG33. Only if mutually agreed between trading partners and if these references are the same for all line items they may be given at header level in the RFF segment in SG1 and not at the detail level.

Purchase Order Change Request

The Purchase Order Change Request is issued to:

- Request a modification of a previously sent Purchase Order,
- Request a modification of previously sent Purchase Order Change Request/Requests,
- Respond to amendments as proposed in one or many previously sent Purchase Order Response/Responses by the seller,
- State acceptance to amendments as proposed in one or many previously sent Purchase Order Response/Responses by the seller.

A change may NOT be requested on:

- Following information in the Header section: Original Purchase Order number, Currency and the identification of buyer and seller. These changes may only be requested by deleting the line items of the referenced message and placing a new order. Deletion of one, many or all line items involved in a transaction is indicated in LIN, DE 1229, for each separate line item using the value '2' (deleted).
- Those data elements which identify the individual items being ordered (RFF in SG33). These changes may only be requested by deleting the referenced line item and adding a new one.
- The information which identifies the item ordered (LIN DE 7140).

A Purchase Order Change Request must always refer to the original Purchase Order at Header level. Furthermore, the last received Purchase Order Response proposing a change to a line item by the seller or the last transmitted Purchase Order Change Request requesting amendments to a line item by the buyer should be referenced at Detail level for the line item concerned (if any). Only if mutually agreed between trading partners and if these references are the same for all line items they may be given at header level in the RFF segment in SG1 and not at the detail level.

The following data must be transmitted:

- Those required to identify the individual items being ordered (RFF in SG33).
- All segments below the LIN segment, when there is a proposed change in one of them.

It is up to the trading partners to decide whether to transmit the entire detail section (including those line items which have not been changed) or only those line items which have changed.

Trading partners may by mutual agreement decide to make the sending of "scheduling conditions (SCC/QTY/DTM) as it was BEFORE the now transmitted message" optional if the information is not needed in their business relationship.

A single segment group SCC must always precede a single SG52, except when there is a request to split the previous schedule. It is recommended to send the previous schedules before the current schedules, either on a one to one basis or grouped together. This must be previously agreed by the trading partners.

It is also up to the trading partners to agree whether quantities previously ordered and received are included in the QTY segments of SG52.

Any change request on information open for change in the header section will automatically apply to the whole original purchase order.

When a line item in the Purchase Order Change Request is sent as "deleted", "not found" or "not amended" by means of the appropriate code for DE 1229 of the LIN segment, no underlying segments of the LIN need to be transmitted except for the RFF segments specifying the original Purchase Order line number and the preceding message document number (if any). If information in the underlying segment is transmitted, all relevant underlying segments must be transmitted.

Purchase Order Response

A Purchase Order Response is issued to:

- State acceptance to the conditions set out in the Purchase Order or Purchase Order Change Request/Requests as requested by the buyer.
- Propose a modification of the previously received Purchase Order
- Propose a modification of previously received Purchase Order Change Request/Requests

Any change request conveyed in an ORDRSP by the seller is to be considered as a proposal.

In case of non-acceptance by the seller, the Purchase Order Response may not propose changes to:

- The Header section except for SG19 (Allowance or charge) of the referenced message. These may only be proposed by not accepting the line items of the referenced message. Non-acceptance of one, many or all line items involved in the transaction is indicated in LIN, DE 1229 for each separate line item using the value '7' (Not accepted).
- Those data elements which identify the individual items being ordered (RFF in SG34).
- The information which identifies the item ordered (LIN DE 7140).

A Purchase Order Response must always refer to the original Purchase Order at Header level. Furthermore, the last received Purchase Order Change Request requesting amendments to a line item by the buyer should be referenced at Detail level for the line item concerned (if any). Only if mutually agreed between trading partners and if these references are the same for all line items they may be given at header level in the RFF segment in SG1 and not at the detail level.

Note that a Purchase Order Response never references the last transmitted Purchase Order Response for the line item in question. The Purchase Order Response is always sent in response to the last received message from the buyer.

The following data must be transmitted:

- That required to identify the individual items being ordered (RFF in SG34).
- All segments below the LIN segment, when there is a proposed change in one of them.

Acknowledgement, confirmation and proposed amendments may be mixed within the message using the appropriate code in LIN.

It is up to the trading partners to decide whether to transmit the entire detail section (including those line items which have not been acted upon) or only those line items which have been acted upon.

Trading partners may by mutual agreement decide to make the sending of "scheduling conditions (SCC/QTY/DTM) as it was BEFORE the now transmitted message" optional if the information is not needed in their business relationship.

A single segment group SCC must always precede a single SG54, except when there is a proposal to split the previous schedule. It is recommended to send the requested schedules before the proposed schedules, either on a one to one basis or grouped together. This must be previously agreed by the trading partners.

It is also up to the trading partners to agree whether quantities previously ordered and received are included in the QTY segments of SG54.

A proposed change to SG19 (Allowance or charge) will automatically apply to the whole purchase order.

When a line item in the Purchase Order Response is acknowledged as "no action", "accepted without amendment", "not accepted", "deleted" or "not found", by means of the appropriate code for DE 1229 of the LIN segment, no underlying segments of the referenced LIN need to be transmitted except for the RFF segments specifying the original Purchase Order line number and the preceding message from the buyer, i.e. preceding Purchase Order Change Request document number (if any). If information in the underlying segments is transmitted, all relevant underlying segments must be transmitted.

Structure of references and scheduling conditions

(for further clarification, see Example 4)

The three messages involved in the purchase order cycle interact at line item level. For example, an original Purchase Order or a Purchase Order Change Request with multiple line items may be responded to with several different Purchase Order Responses. Each one of the Responses may contain responses to one or many of the requested line items of the original Purchase Order or Purchase Order Change Request. Accordingly, a Purchase Order Change Request may contain amendments to one or many line items of a previously transmitted Purchase Order, Purchase Order Change Request or received Purchase Order Response.

Also, the line items that are being responded to in a Purchase Order Response may originate from a Purchase Order or from several Purchase Order Change Requests or from both the original Purchase Order and one or many previous Purchase Order Change Requests. The line items that are being amended in a Purchase Order Change Request may, according to the same principle, originate from several different preceding messages.

Basically, there is an interrelated mechanism in the messages which enable the interaction at line item level: the reference to the previously sent message at line item level, which automatically gives the reference to the previously communicated scheduling conditions for the line item in question.

- ORDERS
 - BGM : purchase order number
 - RFF (SG1) : contract/quote information
 - RFF (SG33) : line number
 - QTY (SG54) : ordered quantity
 - DTM (SG54) : requested delivery/shipment date
- ORDRSP
 - BGM : purchase order response number
 - RFF (SG1) : purchase order number
 - RFF (SG31) : line number
 - RFF (SG31) : preceding Purchase Order Change document number for this line item
 - a) QTY (SG52) : ordered quantity
 - DTM (SG52) : requested delivery/shipment date
 - b) QTY (SG52) : quantity to be delivered
 - DTM (SG52) : schedule delivery/shipment date
- ORDCHG
 - BGM : purchase order change request number
 - RFF (SG1) : purchase order number

	RFF (SG31)	:	line number
	RFF (SG31)	:	preceding message document number for this line item (Purchase Order Change or Purchase Order Response)
a)	QTY (SG52)	:	previous order quantity
	DTM (SG52)	:	superseded date
b)	QTY (SG52)	:	proposed new order quantity
	DTM (SG52)	:	schedule delivery/shipment date

Any subsequent Purchase Order Change or Purchase Order Response to the original order should include

- a. the scheduling conditions (QTY/DTM) as they were BEFORE the now transmitted message, if agreed by the trading partners,
and
- b. the new proposed/requested scheduling conditions except where SG55 is used for positioning or where a line item is being added (see message details for further explanation).

The situation a) is always retrieved from the preceding message for the line item in question.

The preceding message for the line item is always referenced in the RFF segment in SG32.

The original Purchase Order for the line item (and for all line items in the same subsequent message) is always referenced in the RFF segment in SG1.

If no preceding message exists other than the original Purchase Order, there will be no reference in SG32 except for the line number reference. If this is the case, situation a) should be retrieved from the original Purchase Order.

For each line item, there can only be one reference to the preceding message at line item level as there can only ever be one preceding message for that line item.

Identified timing problem:

A mismatch in the referencing mechanism might appear if the buyer and the seller transmit messages involving the same line item/items at the same time. It is up to the business partners to agree on how to handle the situation if it should occur.

BRANCHING DIAGRAM

SEGMENT DESCRIPTION

UNH Message header

Function: A service segment heading, and uniquely identifying the message.
Usage: M1

BGM Beginning of message

Function: A segment uniquely identifying the message by means of its coded name, number and function.
Usage: M1

DTM Date/time/period

Function: A segment specifying the date of creation of the message.
Usage: M1

FTX Free text

Function: A segment providing free form or coded text information, applicable to the whole message.
Usage: O1

SG1 RFF-DTM

Function: A group of segments referencing documents and their dates, relating to the whole message.
Usage: A..3
Notes: One RFF segment specifying contract information should be present, preferably at header level. If this information is given at detail level, it must not appear here.
The DTM segment must be sent where local law requires the date of a reference document to be sent.

RFF Reference

Function: A segment specifying a document reference number.
Usage: M1

DTM Date/time/period

Function: A segment specifying the date of the reference document.
Usage: D1

SG2 NAD-SG3-SG5

Function: A group of segments identifying the parties involved and their associated information, relevant to the whole message.
Usage: R..8
Notes: The NAD segments that identify the buyer and seller must be present.
SG3 is used if EC regulations and/or country law requires reference numbers to be sent.

NAD Name and address

Function: A segment identifying the function and coded identification, name and address of a party involved.
Usage: M1

SG3 RFF

Function: A group of segments giving references relating to the identified buying party involved.
Usage: D..2
Notes:

RFF Reference

Function: A segment specifying a company specific reference.
Usage: M1

SG5 CTA-COM

Function: A group of segments giving contact details of the specific person or department within the identified buying party involved, to whom communication should be directed.
Usage: O..2

Notes: This segment group will only be used under the NAD identifying the buyer.

CTA Contact information

Function: A segment identifying a person or department, and their function.
Usage: M1

COM Communication contact

Function: A segment identifying a communications type and number.
Usage: O..3

SG6 TAX

Function: A group of segments specifying tax related information, applicable to the whole message.
Usage: D1
Notes: Used if country law requires tax to be specified.

TAX Duty/tax/fee details

Function: A segment specifying Value Added Tax, category and rate.
Usage: M1

SG7 CUX

Function: A group of segments specifying the currency, valid for the whole message.
Usage: D1
Notes: The currency must be specified if prices and/or amounts are sent.

CUX Currencies

Function: A segment specifying the order currency for all prices and/or amounts.
Usage: M1

SG8 PYT-PCD

Function: A group of segments specifying the payment terms, applicable to the whole message.
Usage: O1
Notes: Used only if the payment terms need to be conveyed at the time of ordering.
The PCD segment should only be sent if discount payment terms are specified.

PYT Payment terms

Function: A segment specifying the payment terms type and associated time information.
Usage: M1

PCD Percentage details

Function: A segment specifying the discount percentage related to the payment terms.
Usage: D1

SG10 TDT

Function: A group of segments specifying transport details.
Usage: O1
Notes: Used only if details of transport need to be conveyed at the time of ordering.

TDT Transport information

Function: A segment specifying for the main-carriage stage the mode of transport and the carrier information.
Usage: M1

SG12 TOD-LOC

Function: A group of segments indicating the terms of delivery.
Usage: O1

Notes: Used only if terms of delivery need to be conveyed at the time of ordering.
The LOC segment is only used if the terms of delivery ('F' & 'C') require a named location/place.

TOD Terms of delivery or transport

Function: A segment specifying the transport charge method and applicable terms of delivery.
Usage: M1

LOC Place/location identification

Function: A segment identifying a location or place required for the terms of delivery.
Usage: D1

SG13 PAC-SG14

Function: A group of segments identifying consignment packaging with associated information.
Usage: O1
Notes:

PAC Package

Function: A segment specifying the type of shippable packages.
Usage: M1

SG14 PCI

Function: A group of segments specifying the marking and labelling of the shippable packages.
Usage: O1
Notes:

PCI Package identification

Function: A segment specifying the buyer's markings and labelling instructions.
Usage: M1

SG19 ALC-SG21-SG22-SG24

Function: A group of segments specifying allowances and/or charges and related tax information, for the whole message.
Usage: O..10
Notes: Allowances and/or charges at header level and line level are independent, i.e. line level does not override header level.
Both may occur.
SG21 is only used if the allowance or charge is percentage based.
SG22 is only used if the allowance or charge is an absolute monetary amount.
Use SG21 or SG22 but not both.
SG24 is only used if tax or duty apply to the allowance or charge.

ALC Allowance or charge

Function: A segment specifying an allowance or charge, its settlement and calculation sequence.
Usage: M1

SG21 PCD

Function: A group of segments specifying an allowance or charge as a percentage.
Usage: D1
Notes:

PCD Percentage details

Function: A segment specifying an allowance or charge percentage applying to the order value.
Usage: M1

SG22 MOA

Function: A group of segments specifying the total monetary amount for the allowance or charge.
Usage: D1

Notes: The currency of this monetary amount is determined in the header CUX segment and cannot be different here.

MOA Monetary amount

Function: A segment specifying the total monetary amount.
Usage: M1

SG24 TAX

Function: A group of segments specifying tax related information for the allowance or charge.
Usage: D 1
Notes:

TAX Duty/tax/fee details

Function: A segment specifying Value Added Tax, category and rate.
Usage: M1

SG29 LIN-PIA-IMD-QTY-ALI-FTX-SG33-SG34-SG35-SG40-SG41-SG45-SG55

Function: A group of segments providing ordering details of the individual line items i.e. ordered products or services.
Usage: R ..9999
Notes: The PIA segment is dependent on whether the primary reference to the line item being ordered is insufficient to identify the item.
The IMD segment is used to provide an additional description of the primary reference to the line item being ordered. It may also be used for items that can not be identified by a code or article number.
SG35 is used to specify any alternative packaging methods which have been agreed between trading partners.
SG40 is used if country law requires tax to be specified.

LIN Line item

Function: A segment identifying a line item by its item number, and agreed to be the primary reference number between the buyer and seller.
The segment also carries a sequence number assigned to the line item within the message.
Usage: M1

PIA Additional product id

Function: A segment providing additional identification numbers for the line item.
Usage: D..10

IMD Item description

Function: A segment specifying ship to stock or ship to line quality and/or an additional description in clear or coded form, for the line item.
Usage: D 1

QTY Quantity

Function: A segment specifying the total ordered quantity for the line item.
Usage: R 1

ALI Additional information

Function: A segment indicating the country of origin for the line item.
Usage: O 1

FTX Free text

Function: A segment providing free form or coded text information for the line item.
Usage: O 1

SG33 PRI

Function: A group of segments specifying pricing information for the line item.

Usage: A 1
Notes:

PRI Price details

Function: A segment specifying the line item price and the qualifying information.
Usage: M1

SG34 RFF-DTM

Function: A group of segments specifying references for the line item.
Usage: R..5
Notes: The DTM segment must be sent where local law requires the date of a reference document to be sent.

RFF Reference

Function: A segment specifying the line item reference number as given by the buyer, or a document reference number.
Usage: M1

DTM Date/time/period

Function: A segment specifying the date of the reference document.
Usage: D 1

SG35 PAC-QTY-SG37

Function: A group of segments specifying product packaging information.
Usage: D 1
Notes:

PAC Package

Function: A segment specifying the product package type.
Usage: M1

QTY Quantity

Function: A segment specifying the number of products contained in the package type.
Usage: O 1

SG37 PCI

Function: A group of segments specifying the marking and labelling instructions for the product packages.
Usage: O 1
Notes:

PCI Package identification

Function: A segment specifying the buyer's marking and labelling instructions.
Usage: M1

SG40 TAX

Function: A group of segments specifying tax related information for the line item.
Usage: D 1
Notes:

TAX Duty/tax/fee details

Function: A segment specifying Value Added Tax, category and rate for the line item.
Usage: M1

SG41 NAD-SG43

Function: A group of segments identifying the parties involved and their associated information, for the line item.
Usage: O..4

Notes: End customer identification provided here overrides the end customer identification on header level.
SG43 is only used when DE 3035 in NAD = 'BY'.

NAD Name and address

Function: A segment identifying the buyer as the party requesting the certificates, the manufacturer's code, the buyer (distributor's) end customer or the ultimate destination party, for the line item.
Usage: M1

SG43 DOC

Function: A group of segments specifying the certificates.
Usage: D..2
Notes:

DOC Document/message details

Function: A segment specifying a requested certificate.
Usage: M1

SG45 ALC-SG46-SG47-SG48-SG50

Function: A group of segments specifying allowances and/or charges and related tax information for the line item.
Usage: O..10
Notes: Allowances and/or charges at header level and line level are independent, i.e. line level does not override header level.
Both may occur.
SG46 is only used if the allowance or charge is quantity related.
SG47 is only used if the allowance or charge is percentage based.
SG48 is only used if the allowance or charge is an absolute monetary amount.
Use only one of SG46, SG47 and SG48.
SG50 is only used if tax or duty apply to the allowance or charge.

ALC Allowance or charge

Function: A segment specifying an allowance or charge, its settlement and calculation sequence.
Usage: M1

SG46 QTY

Function: A group of segments specifying quantity information for an allowance or charge.
Usage: D 1
Notes:

QTY Quantity

Function: A segment specifying the ordered quantity as the basis for an allowance or charge.
Usage: M1

SG47 PCD

Function: A group of segments specifying an allowance or charge as a percentage.
Usage: D 1
Notes:

PCD Percentage details

Function: A segment specifying an allowance or charge percentage.
Usage: M1

SG48 MOA

Function: A group of segments specifying the total monetary amount of the allowance or charge.
Usage: D 1
Notes: Currency of monetary amount is determined in the header CUX segment and cannot be different here.

MOA Monetary amount

Function: A segment specifying a monetary amount.
Usage: M1

SG50 TAX

Function: A group of segments specifying tax related information for the allowance or charge.
Usage: D 1
Notes:

TAX Duty/tax/fee details

Function: A segment specifying Value Added Tax, category and rate.
Usage: M1

SG55 SCC-RFF-SG56

Function: A group of segments specifying firm scheduling conditions.
Usage: R ..100
Notes:

SCC Scheduling conditions

Function: A segment specifying a firm delivery.
Usage: M1

RFF Reference

Function: A segment identifying the schedule reference number as given by the buyer.
Usage: D 1

SG56 QTY-DTM

Function: A group of segments specifying the delivery dates and quantities scheduled.
Usage: R 1
Notes:

QTY Quantity

Function: A segment specifying a quantity.
Usage: M1

DTM Date/time/period

Function: A segment specifying the corresponding date of the quantity.
Usage: R 1

UNS Section control

Function: A service segment separating detail and summary section.
Usage: M1

UNT Message trailer

Function: A service segment ending, and providing information for checking the completeness of a message.
Usage: M1

SEGMENT DETAILS

UNH

UNH Message header

Function: A service segment heading, and uniquely identifying the message.

Usage : M1

Notes : Refer to EDIFICE Utilisation of the UN/EDIFACT Service Segments, Issue EDSS10

SG29 LIN-PIA-IMD-QTY-ALI-FTX-SG33-SG34-SG35-SG40-SG41-SG45-SG55**LIN Line item**

Function: A segment identifying a line item by its item number, and agreed to be the primary reference number between the buyer and seller.

The segment also carries a sequence number assigned to the line item within the message.

Usage : M1

Notes : For a line item referring to a service which has no coded identification, the primary identification is found in segment IMD, rather than in CO C212.

Ref.	Rep.	Name	EDIFICE Utilisation	
1082	an..6	C LINE ITEM IDENTIFIER	R	It is required to assign a number to the line items within a message. The number is assigned by the sender of the message. The first line item within a message will be numbered 1 and further line items will be incremented by 1 for each new line.

SG41 NAD-SG43**NAD Name and address**

Function: A segment identifying the buyer as the party requesting the certificates, the manufacturer's code, the buyer (distributor's) end customer or the ultimate destination party, for the line item.

Usage : M1

Notes : C082 is used only :

If DE 3035 = 'MF' then DE 3039 specifies the manufacturer's code

If DE 3035 = 'MA' or 'PC' then DE 3039 specifies the end customer number; 'PC' is used for pricing purposes and 'MA' to indicate the ultimate destination party.

Ref.	Rep.	Name	EDIFICE Utilisation

SG45 ALC-SG46-SG47-SG48-SG50**ALC Allowance or charge**

Function: A segment specifying an allowance or charge, its settlement and calculation sequence.

Usage : M1

Notes : If an allowance or charge is previously agreed, CO C552 is used to convey this. If an allowance or charge is required at the time of ordering, use CO C214. These data elements cannot be used in the same segment occurrence. Use DE 1227 to specify sequence of calculation if more than one ALC segment is used.

Ref.	Rep.	Name	EDIFICE Utilisation	
5463	an..3	M ALLOWANCE OR CHARGE CODE QUALIFIER	M	A = Allowance C = Charge
C552		C ALLOWANCE/CHARGE INFORMATION	D	Either DE 1230 or DE 5189 has to be used.
1230	an..35	C Allowance or charge identifier	D	
5189	an..3	C Allowance or charge identification code	D	
4471	an..3	C SETTLEMENT MEANS CODE	D	5 = Charge to be paid by vendor 6 = Charge to be paid by customer
1227	an..3	C CALCULATION SEQUENCE CODE	D	Use this if DE 5463 indicates 'Charge' To specify the sequence in which an allowance or charge is calculated. The number must be in ascending order, with no gaps and starting from 1. The basis for calculation of the first allowance or charge is the amount for the line item. The basis for calculation of any subsequent allowance or charge is the amount for the line item resulting from the previous calculation.

---	--

The following principles set out in the EDIFICE FUNCTIONAL DEFINITION apply:

In any subsequent message to the original Purchase Order, SG56 should contain:

- * the scheduling conditions (QTY/DTM) as it was BEFORE the now transmitted message
- ** the new proposed/requested scheduling conditions

- "*" is always retrieved from the preceding message for the line item in question.
- The preceding message for the line item is always referenced in the RFF segment in SG34.
- The original Purchase Order for the line item is always referenced in the RFF segment in SG1.
- If no preceding message exists other than the original Purchase Order, there will be no reference in SG34 except for the line number reference. If this is the case, it is from the original Purchase Order situation "*" should be retrieved.

1: Buyer sends ORDERS for lines 75 and 93

The original Purchase Order references the business/commercial agreement at header level and the line number for each individual item being ordered at detail level. The scheduling conditions, ordered quantity and requested delivery date, are marked with a), b) and c).

2: Seller sends ORDRSP for lines 75 and 93

The Purchase Order Response references the original Purchase Order at header level and the line number for each individual item being responded to at detail level.

Since the Purchase Order Response is a subsequent message to the original Purchase Order, the principles set out in the EDIFICE FUNCTIONAL DEFINITION apply. This is the first message transmitted subsequent to the original Purchase Order, i.e. no other preceding message exists for any of the line items involved, which means that "the scheduling conditions (QTY/DTM) as it was BEFORE the now transmitted message" ("*") is retrieved from the referenced original Purchase Order for both line 75 and 93 and is immediately followed by the new proposed scheduling conditions:

- Line number 75, first schedule
 - a) shows "the scheduling conditions (QTY/DTM) as it was BEFORE the now transmitted message" ("*"). It has been retrieved from the original Purchase Order (where it is also marked "a)").
- d) shows "the new proposed/requested scheduling conditions" by the seller.
- Line number 75, second schedule

When the 'requested' schedule is accepted by the seller or if the schedule is transmitted for positioning purposes, only "***" is required to be transmitted (see section Remarks, SG55 in the ORDRSP documentation). When this is the case, it is understood that "the scheduling conditions (QTY/DTM) as it was BEFORE the now transmitted message" is identical with "the new proposed/requested scheduling conditions". The scheduling conditions "e)" is in other words the new situation as proposed by the seller. It is however identical to what was requested by the buyer in b).
- Line number 93, all schedules.

The action request code states acceptance without amendment signifying that no part of the detail section, except for the RFF segments carrying the references to line number and preceding Purchase Order Change Request (if any) for the line item, needs to be transmitted (see section Remarks, SG32 in the ORDRSP documentation). It is understood that the requested schedule "c)" of the original Purchase Order is accepted by the seller.

3: Buyer sends ORDCHG for line 75

The Purchase Order Change Request references the original Purchase Order at header level. At detail level, the line number and the preceding message for the line item involved are referenced.

Since the Purchase Order Change Request is a subsequent message to the original Purchase Order, the principles set out in the EDIFICE FUNCTIONAL DEFINITION apply. Accordingly, this Purchase Order Change Request is issued to propose amendments to the Purchase Order Response received for the line item in question:

- Line number 75, first schedule.

The schedule is transmitted for positioning purposes (see section Remarks, SG54 in the ORDCHG documentation). It is understood that situation "*" in the EDIFICE FUNCTIONAL DEFINITION is identical with "***" in this case. Situation "*" is retrieved from POresponsenumber1, as indicated by the reference at detail level. Thus, the scheduling conditions "g)" represents the new situation as requested by the buyer. It is identical to the scheduling conditions "d)" as proposed by the seller in POresponsenumber1.
- Line number 75, second schedule
 - h) shows "the scheduling conditions (QTY/DTM) as it was BEFORE the now transmitted message" ("*"). It has been retrieved from POresponsenumber1, "e)", in accordance with the reference to the preceding message at detail level.
 - i) shows "the new proposed/requested scheduling conditions", i.e. the new requested situation by the buyer.

4: Buyer sends ORDCHG for line 93

The Purchase Order Change Request references the original Purchase Order at header level. At detail level, the line number and the preceding message for the line item involved are referenced.

Since the Purchase Order Change Request is a subsequent message to the original Purchase Order, the principles set out in the EDIFICE FUNCTIONAL DEFINITION apply.

- Line number 93.
 - j) shows situation "*". It has been retrieved from POresponsernumber1, in accordance with the reference to the preceding message at detail level. It is understood that the situation reflected in "j)" has not changed after the first appearance of these scheduling conditions in the original Purchase Order as "c)", since POresponsernumber1 accepted "c)" without amendments.
 - k) shows situation "***", i.e. the new requested situation by the buyer.

5: Seller sends ORDRSP for line 93

The Purchase Order Response references the original Purchase Order at header level. At detail level, the line number and the last received message, i.e. the last received Purchase Order Change Request, for the line item involved are referenced.

Since the Purchase Order Response is a subsequent message to the original Purchase Order, the principles set out in the EDIFICE FUNCTIONAL DEFINITION apply.

- Line number 93.

The preceding message for this line number is POchangenumber2, as indicated in one of the RFF segments at detail level. Thus, it is the requested situation of POchangenumber2 for line number 93 that will be responded to in this response and from which "*" will be retrieved

 - l) shows situation "*". It corresponds to "the new proposed/requested scheduling conditions" in the preceding message, i.e. in POchangenumber2, which is "k)".
 - m) shows "the new proposed/requested scheduling conditions" by the seller.

6: Seller sends ORDRSP for lines 75 and 93

The Purchase Order Response references the original Purchase Order at header level. At detail level, the line number and the last received message, i.e. the last received Purchase Order Change Request, for the line item involved are referenced. Note that the two line items reference different Purchase Order Change Requests this time.

Since the Purchase Order Response is a subsequent message to the original Purchase Order, the principles set out in the EDIFICE FUNCTIONAL DEFINITION apply.

- Line number 75, first schedule

The preceding message for this line number is POchangenumber 1, which is referenced in the RFF segment at detail level.

 - n) shows situation "*". It corresponds to "the new proposed/requested scheduling conditions" in the preceding message, i.e. in POchangenumber1, which is "g)".
 - o) shows "the new proposed/requested scheduling conditions" by the seller. In this case, it is a 'split' situation (see section Remarks, SG54 in the ORDRSP documentation).
- Line number 75, second schedule
 - p) indicates that the schedule requested by the buyer in POchangenumber1 has been fully accepted by the seller.
- Line number 93.

Note that this is the second response in a row for line 93. The preceding message to reference for the seller is still the last received Purchase Order Change Request for the line item, since a Purchase Order Response always is sent in response to the last received message from the buyer.

The action request code states acceptance without amendment signifying that no part of the detail section, except for the RFF segments carrying the references to line number and preceding Purchase Order Change Request for the line item, needs to be transmitted (see section Remarks, SG32 in the ORDRSP documentation). The implication is that the requested schedule k) in the Purchase Order Change Request with document number "POchangenumber2" now has been fully accepted by the seller.

General remarks

The mechanism regarding references and scheduling conditions caters for:

- Single line item ORDERS being responded to by single line item ORDRSP's and amended by single line item ORDCHG's.
- Multiple line item ORDERS being responded to by multiple line item ORDRSP's and amended by multiple line item ORDCHG's.
- As each line item has its own life cycle, any subsequent message to the original Purchase Order may act on the different line items independently (see message 6: in the example above).
 - * an ORDRSP may respond to line items retrieved from one or more ORDCHGs or from the ORDERS message or from a combination of the two.
 - * an ORDCHG may request amendments to line items retrieved from different previously received ORDRSP's
 - * etc.

Note that the principle applied on all occasions is that any subsequent message to the original Purchase Order must reference the preceding message for the line item in question, this is being done by means of the RFF segment in SG34.
