COMPARISON TO PREVIOUS ISSUE

Issue EDOS02 of 13 November 2002 is based on UN/EDIFACT D97.A / Code List D01.A

- Addition of the following code value:
 - o SG5, LIN segment, CO C212, DE 7143 code 'SRV' EAN.UCC Global Trade Item Number
 - o SG5, PIA segment, CO C212, DE 7143 code 'SRV' EAN.UCC Global Trade Item Number

Issue EDOS01 of 29 May 2002 - addition of recommended set of DTM qualifiers

EDIFICE FUNCTIONAL DEFINITION

Principles

The message is built to meet requests between parties, from supplier to distributor, exchanging order book information as a whole set of data.

The order status report message is sent on request or at a fixed schedule, mutually agreed between partners. This can be stated in a separate agreement.

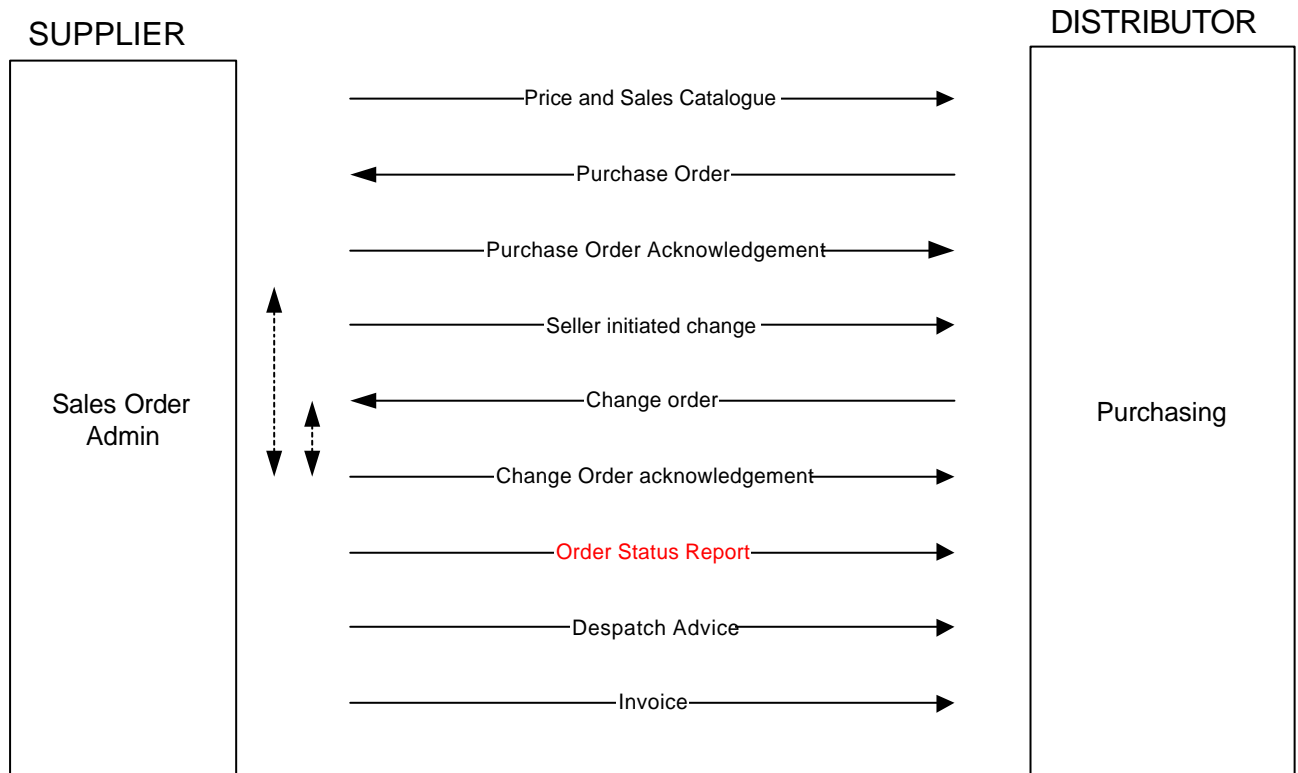

The order status report message carries complete order book information known at the elaboration date/time. It is a snapshot of the supplier order book.

In the order status report message, the supplier sales order reported at DOC level, contains only the open line items remaining to be delivered against this supplier sales order number.

The order status report message doesn't replace the Despatch Advice message or the Invoice message for devices in transit between supplier and buyer at the elaboration date/time of the message. The relevant messages must be used to comply with the normal flow of information and according to the logical schedule of treatment in using the sequential interchange number sent at UNB level.

The order status report message is intended to synchronise data between partners because some messages in the business flow can be incomplete, missing, wrongly understood or some change of data cannot be transferred due to the application.

ORDER PROCESSING FLOW

Example of information which could not be transferred or not well translated, foreseen in the messages (Order Response message) but sometimes not handled by the systems:

- Early warning information like new delivery date (seller initiated).
- Partial order confirmation (buyer request/seller application).
- Split of quantity and date in the order confirmation (buyer application).
- Automatic cancellation of small balanced quantity in the seller order book (seller initiated).
